

KING ABDULLAH FINANCIAL DISTRICT CONFERENCE CENTER

RIYADH, SAUDI ARABIA

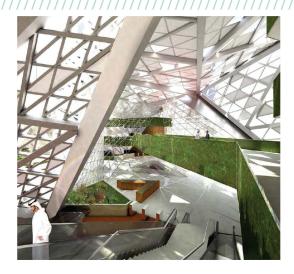

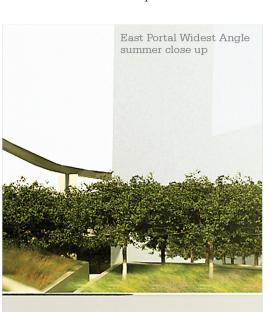

Wadi Approach

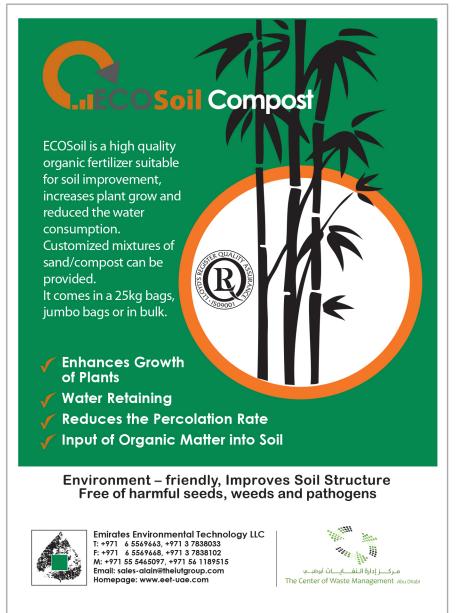

Re-introducing native grasses and flora into a large scale public space setting, indigenous plant communities spatially organize and blur the boundaries between the building's undulating "exoskeleton" skin and its surrounding landscape.

The future of Saudi Arabia's public landscape will indefinitely be influenced by this project's sustainable demonstration of viable "green" design strategies within a public domain and its renewed reconnection with the country's ecological heritage.

ut of the financial district's urban master plan, the KAFD Conference Center emerges as an iconic structure. Representative of the local "Wadi" landscape, HMWhite's design fuses landscape and structure.

LANDSCAPE/URBANISM

Section A, B, and C

A custom hypertufa growing medium emulates the regional limestone cliff growing conditions. Flexibility to deploy cliff dwelling plants in a modular form across the center's varied planes and surfaces enables the vegetation and hypertufa to mimic the desert landscape.

The exterior strategy seamlessly flows into the building, where the vegetation becomes denser and creates a cooler, lush ambiance. Improving interior air quality, interior living walls weave in overlapping planted planes. Consisting of wild Agaves, Bromeliads, xeric ferns and perennials, the interior typology emulates a grotto oasis.

With an anticipated spring 2013 opening, the Conference Center's statuesque presence and iconic design has led to the decision to use it as the location for King Abdullah's KAFD development dedication speech.

HMWhite's design integrates innovative environmental best practices for the conference center's exterior and interior environments. By establishing this
